

# Electron Microscopy Centre Amsterdam

## Available Techniques:

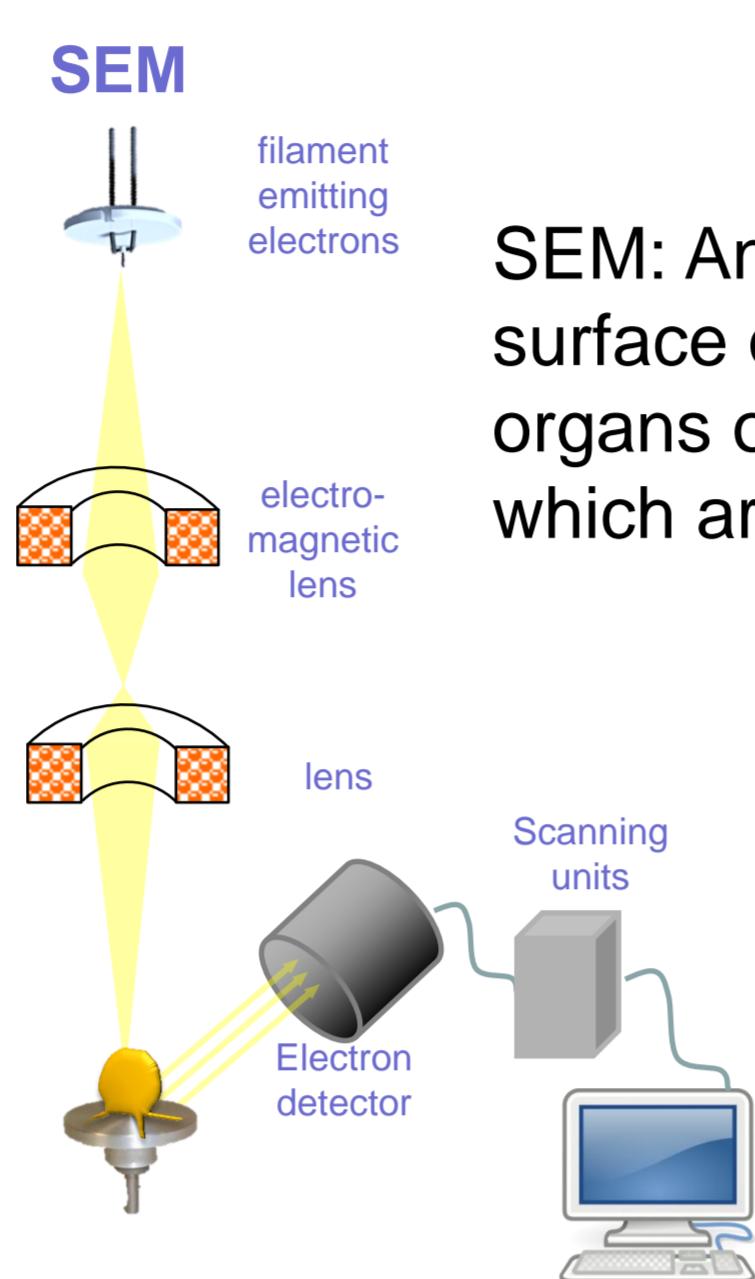

core facility  
Cellular Imaging

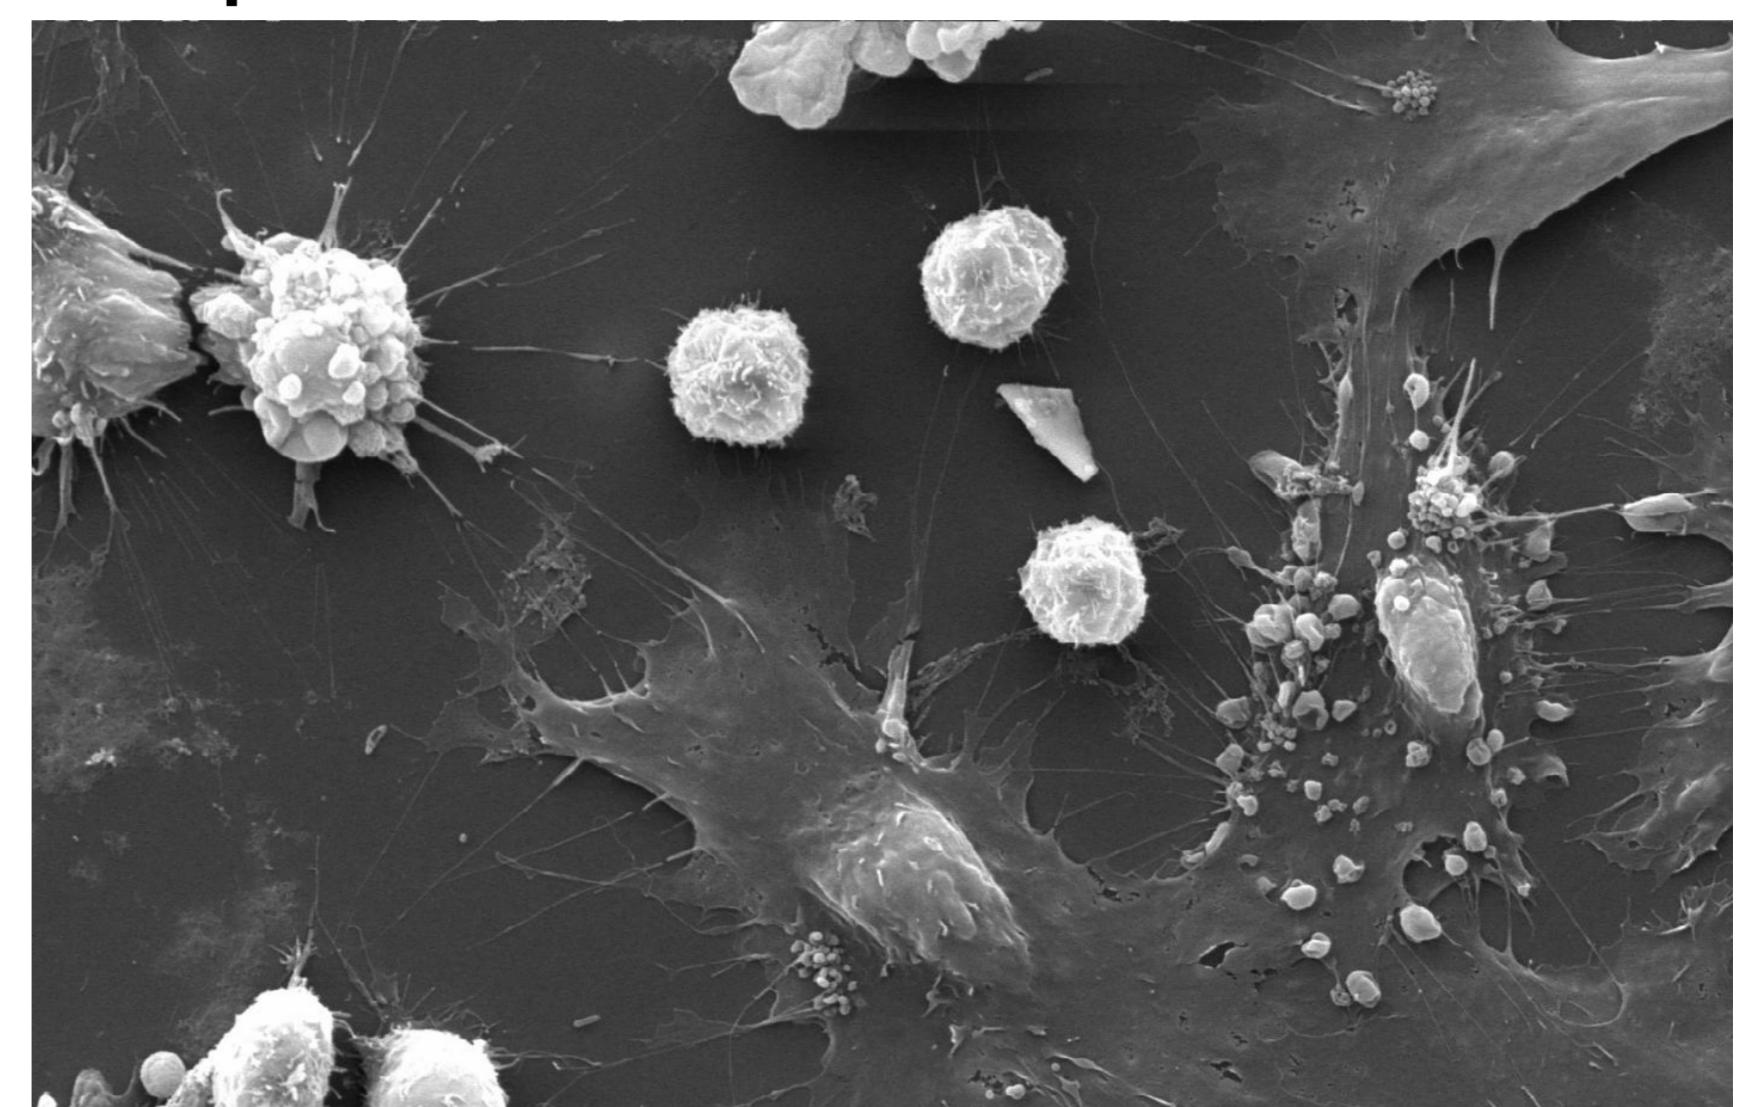

### Introduction technique:

SEM;  
Scanning electron microscopy

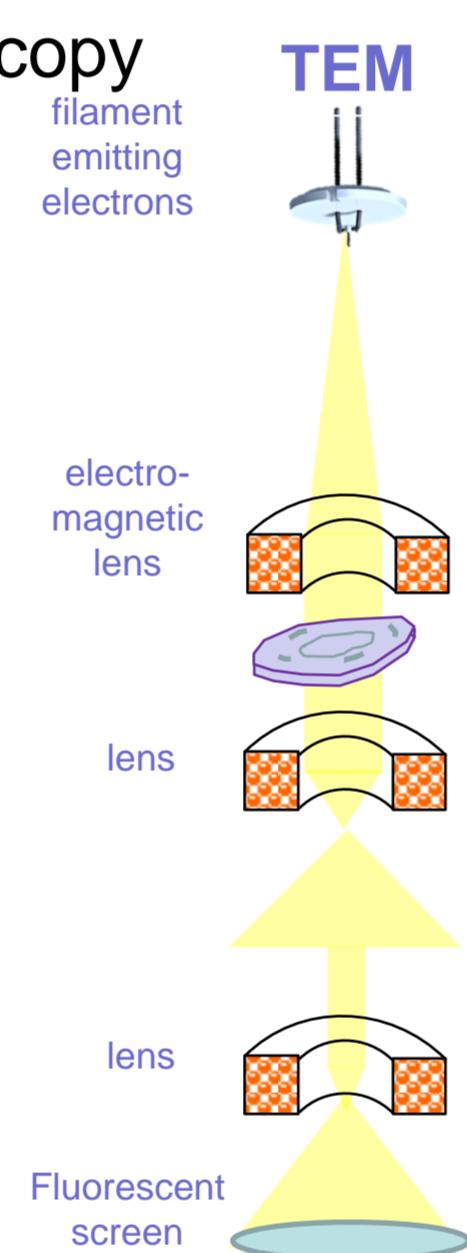

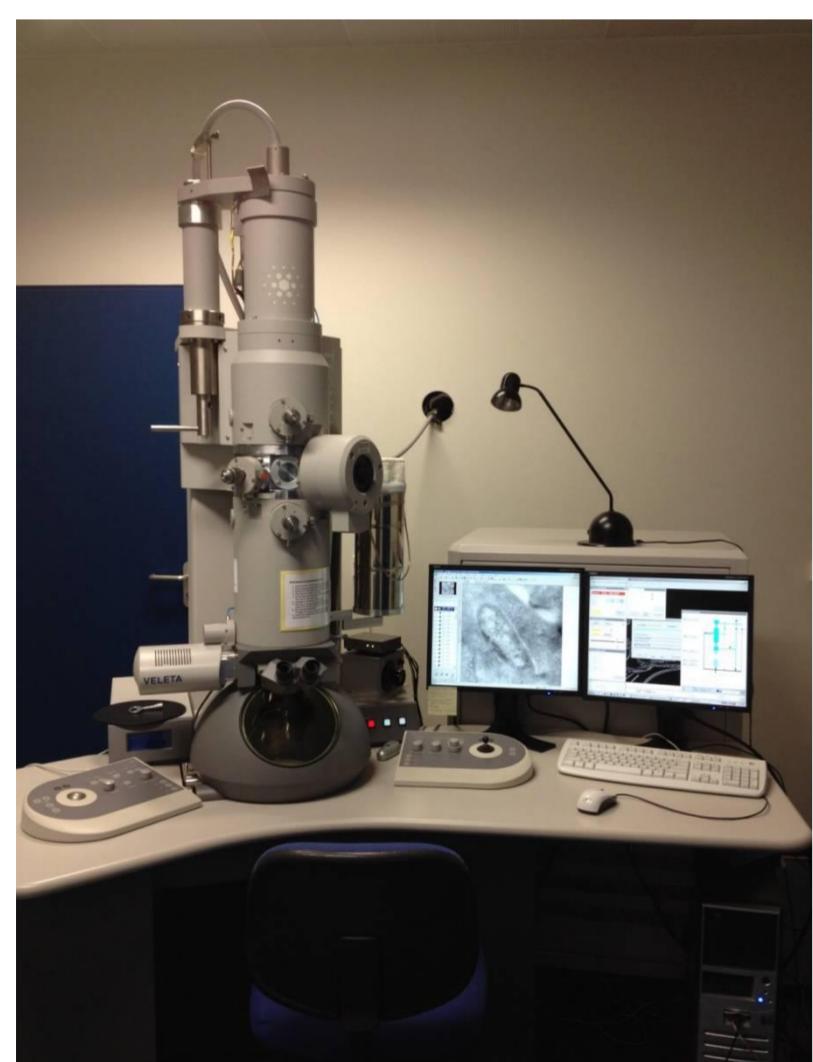

SEM: Analysis of the surface of cells, tissues, organs or organisms which are metal coated

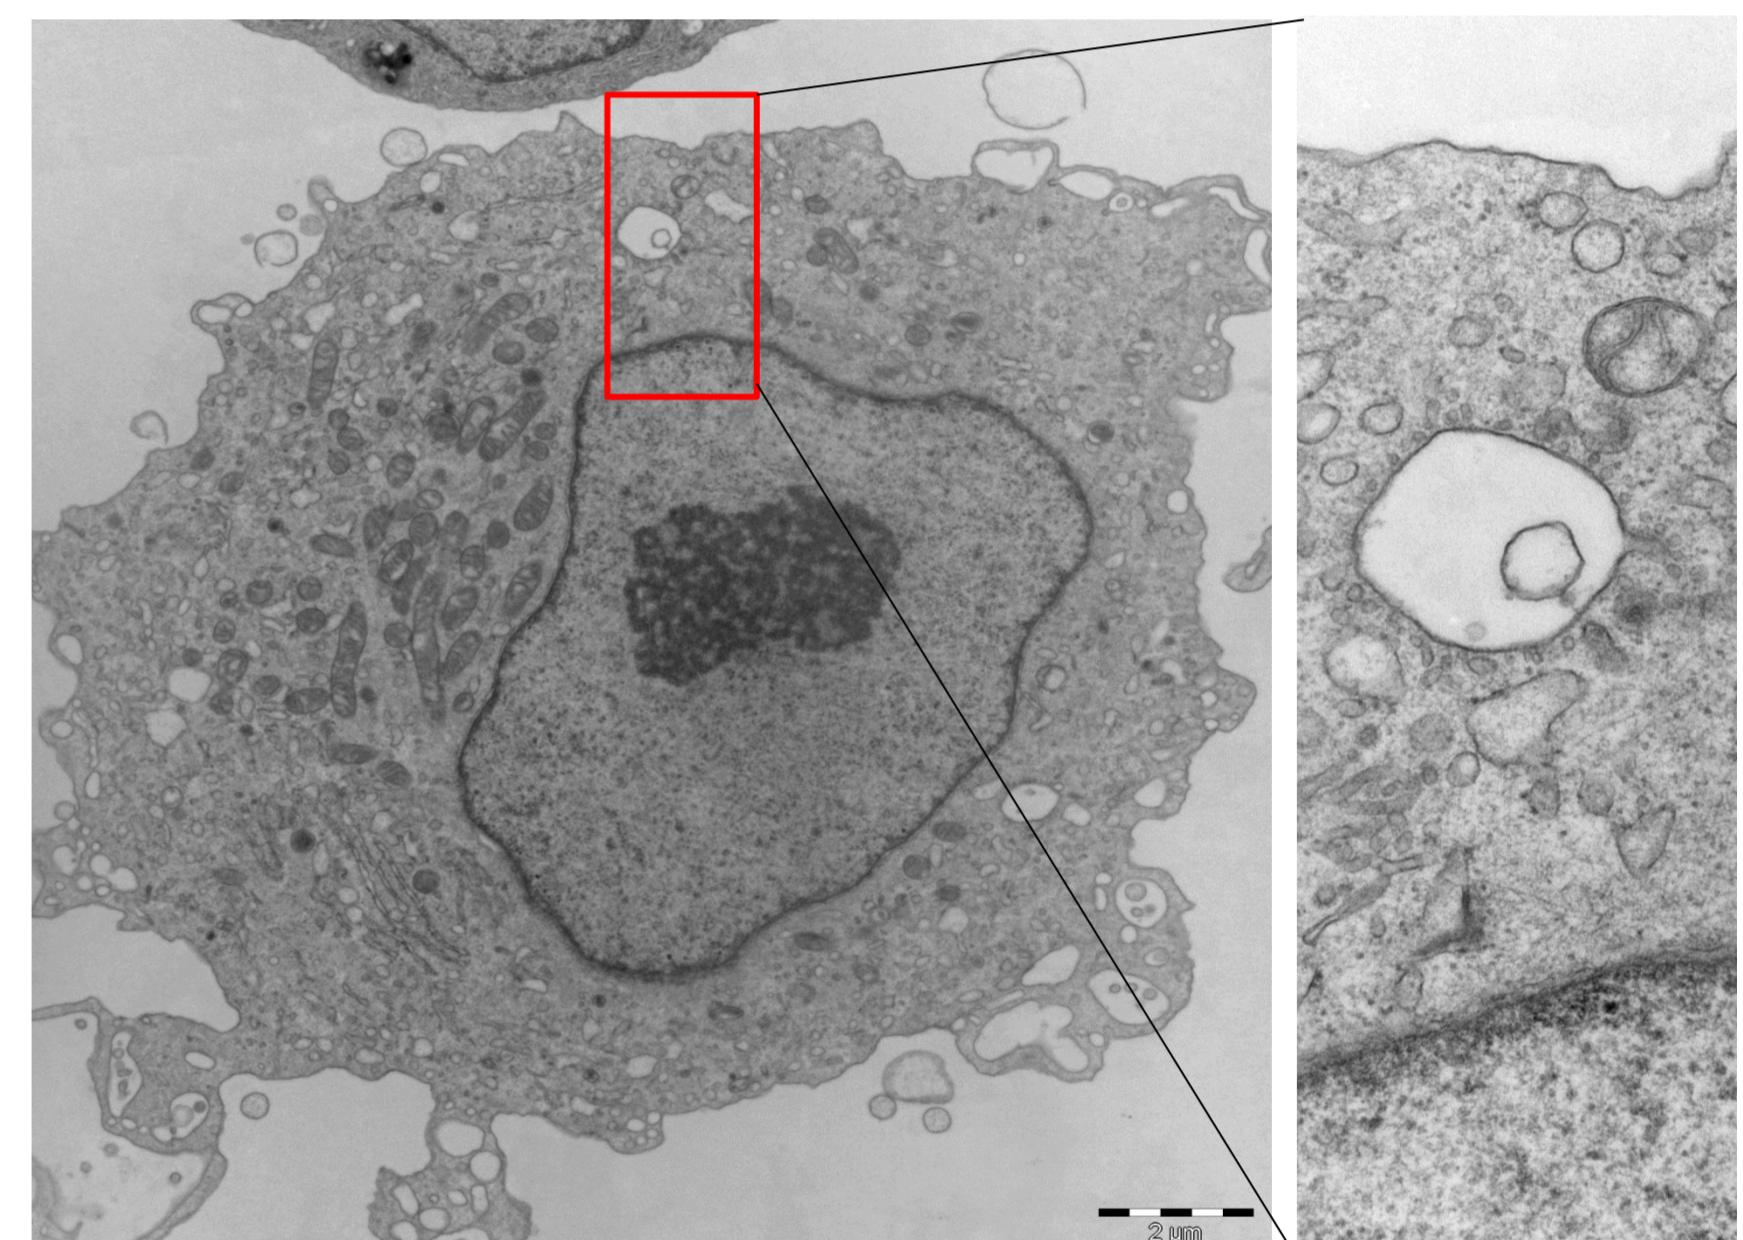

### Examples:

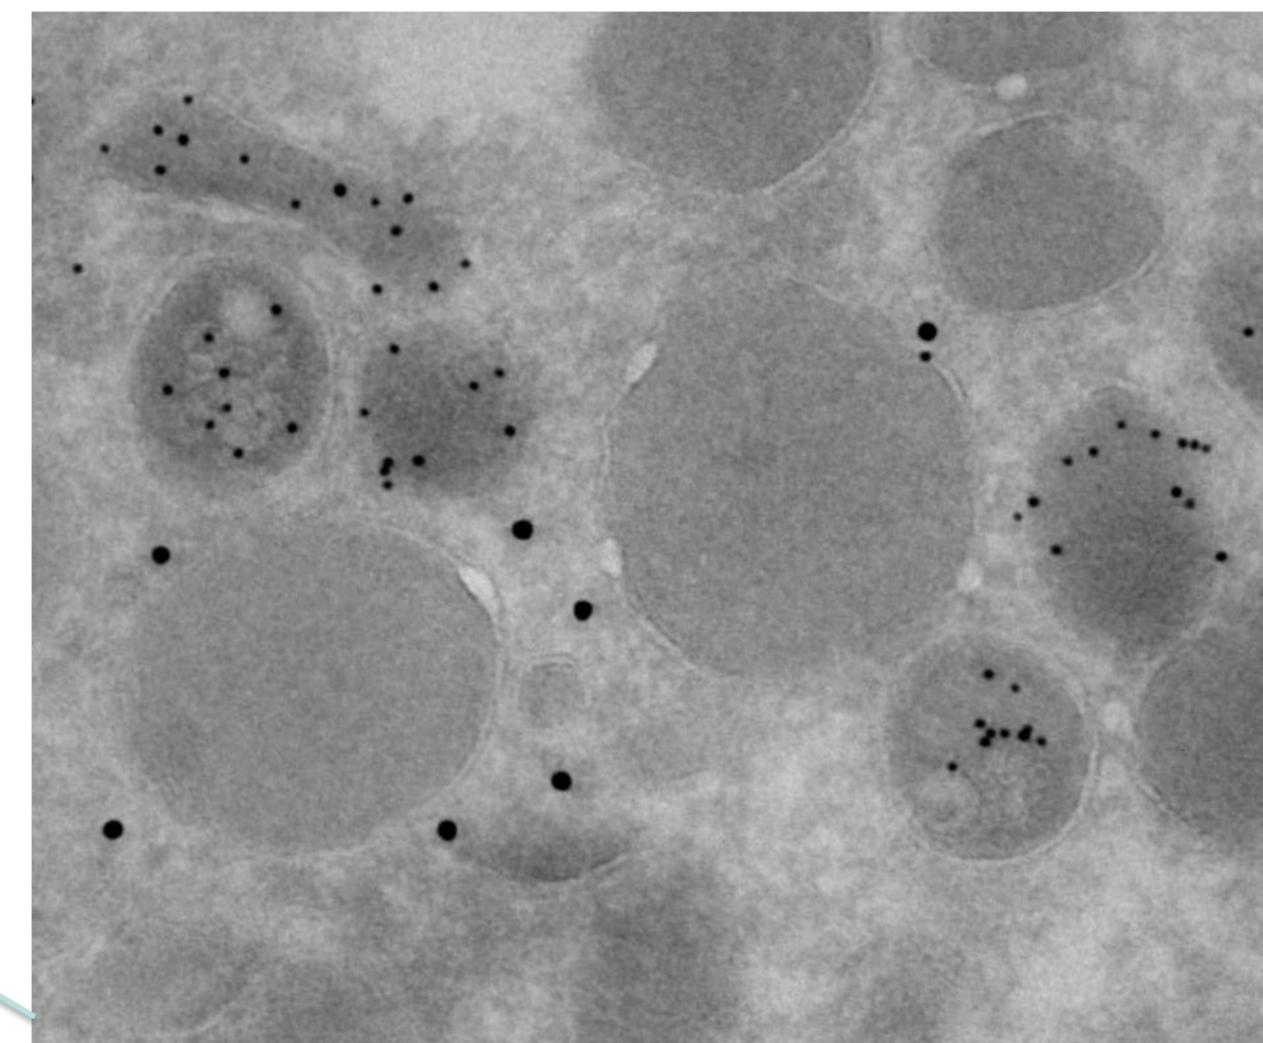

TEM;  
transmission electron microscopy

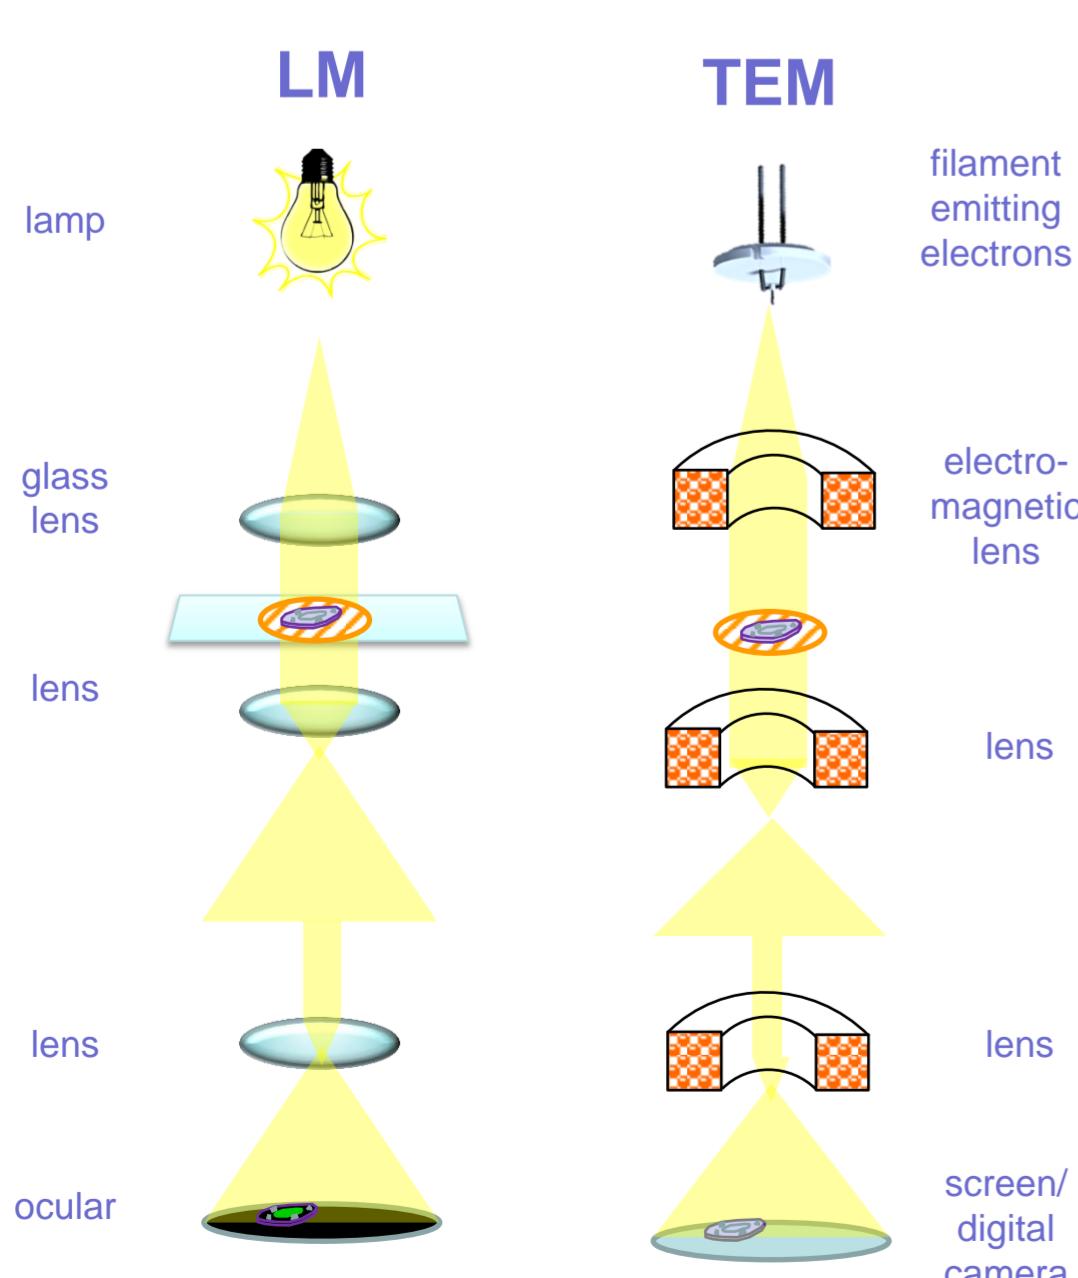

Analysis of ultrastructure of cells and tissues which are metal stained and plastic embedded to cut ultrathin sections

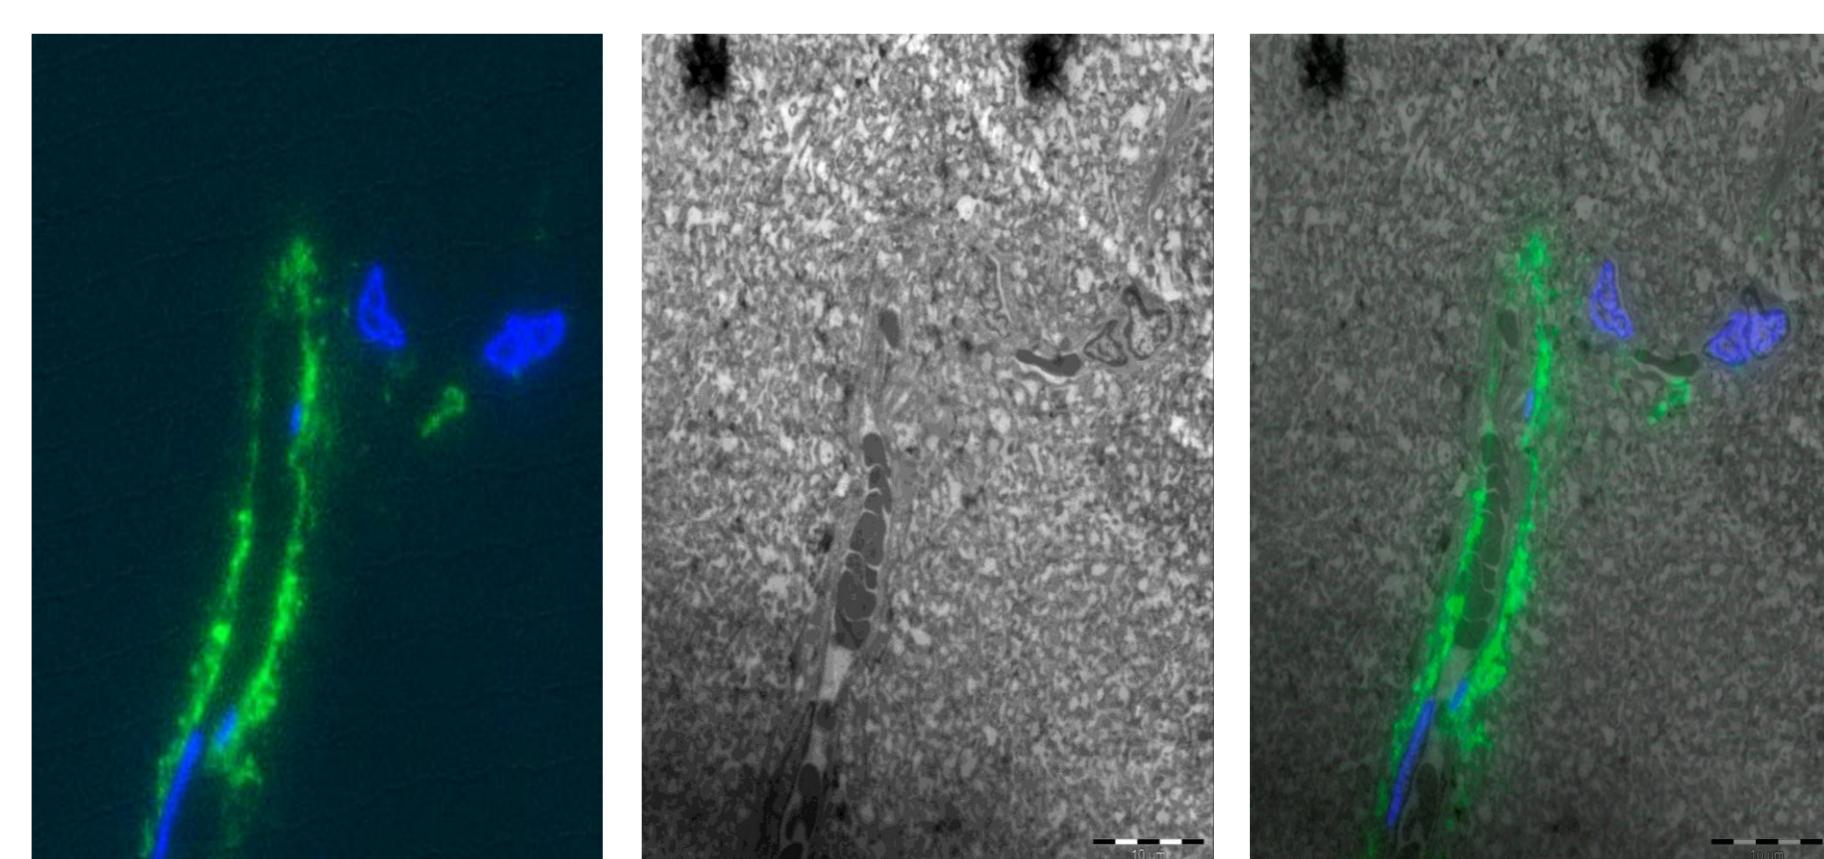

Immuno-EM:  
Mildly fixed cells and tissues with gold labeling on proteins in ultrathin sections

### CLEM (Combined Light Electron Microscopy)

CLEM: image sample in fluorescence microscopy and then image the same sample using electron microscopy to combine the images and localize fluorescence in TEM

Samples: Henk van der Veen, Carla Ribeiro, Anne van der Spek, Bea Bedussi

### Contact EMCA:

Nicole van der Wel (Head EMCA)

[n.n.vanderwel@amc.nl](mailto:n.n.vanderwel@amc.nl)

Meibergdreef 15

1105 AZ Amsterdam The Netherlands

tel: +31 (0)20 566 4757

EMCA is part of the AMC Core facility Cellular Imaging  
Head: Eric Reits
